Mobility and Energy storage Systems

T H E   P O W E R - T O - G A S   G R O U P

## MESY's Carbon Emission Reduction strategy

# New strategy for cost savings of Billions in the Energy Market

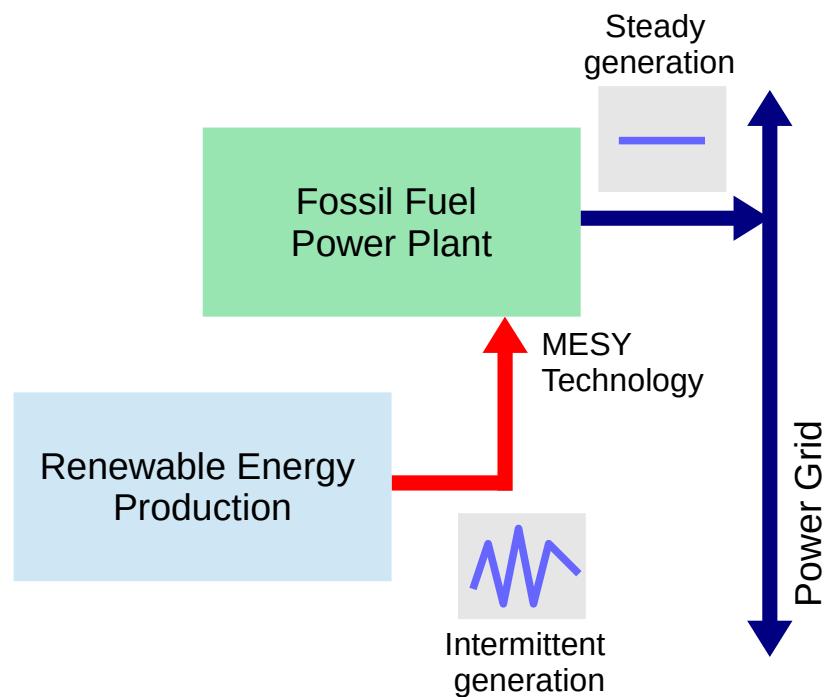

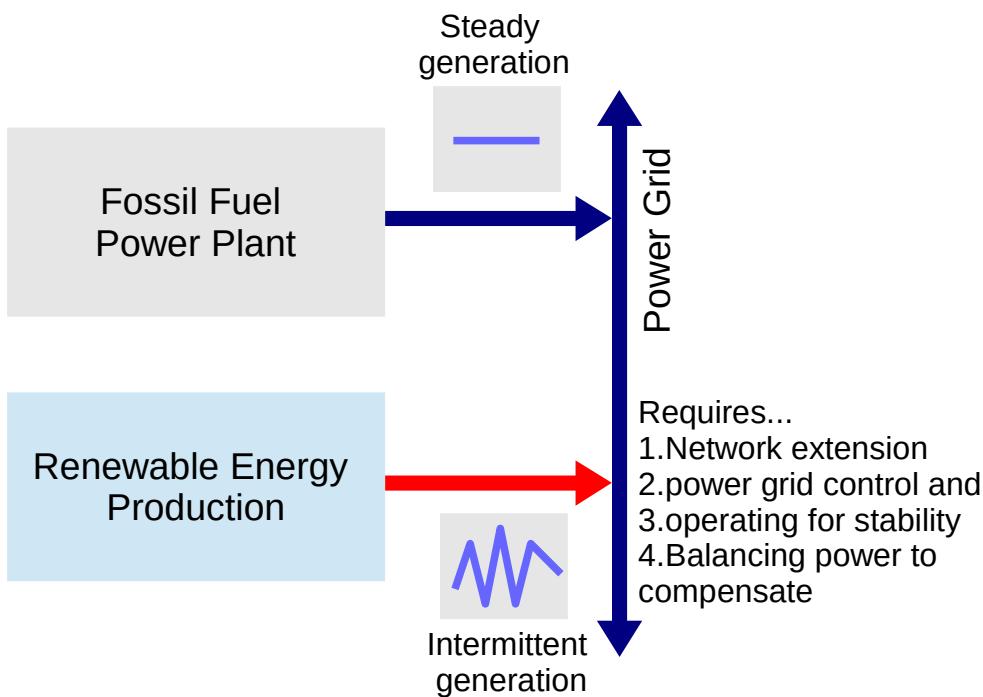

## Very expensive and complex.

Requires Billions of Investments to stabilize Power Grids  
(e.g. Germany 21 Milliarden €)

## Very cheap and simple.

No Investments necessary to stabilize the power grids.

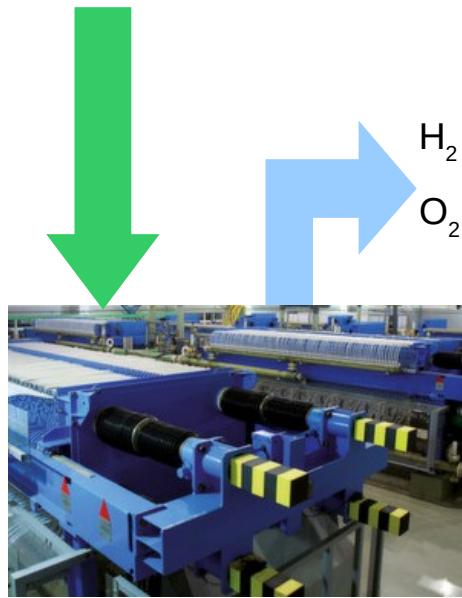

Economy effects for the energy markets

# 1. Examples

## CO<sub>2</sub>-Reduction without follow-up costs, worldwide

CO<sub>2</sub> free  
Energy Production

LARET<sup>®</sup>  
Electrolyzer

BLUESKY-PIPELINE  
H<sub>2</sub> and O<sub>2</sub>

HYENTRANS<sup>®</sup>  
High power  
Steam Generation

Coal fired power plant to LEPP

Gas power plant to LEPP

MESY Technology

ZEPP = Zero Emission Power Plant

LEPP = Low Emission Power Plant

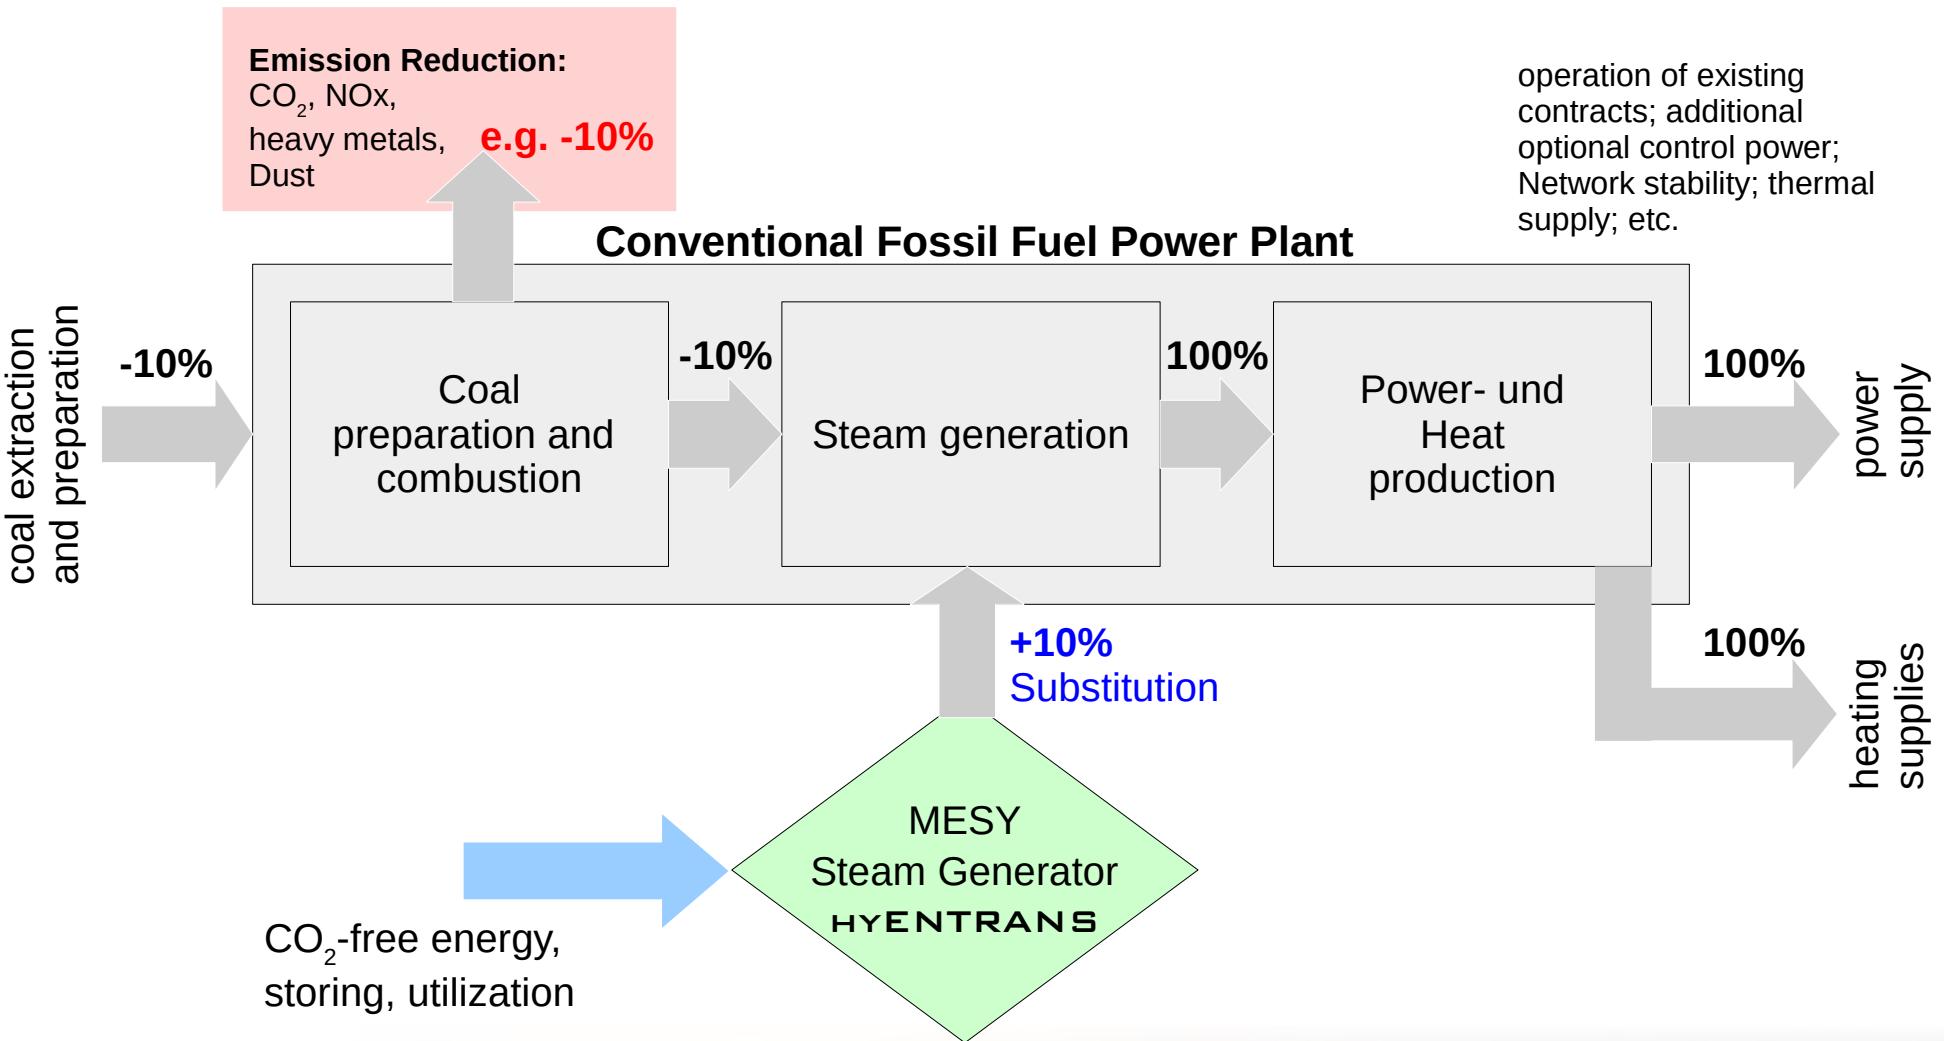

New ZEPP

# The Strategy of CER

## Carbon Emission Reduction

How it works?

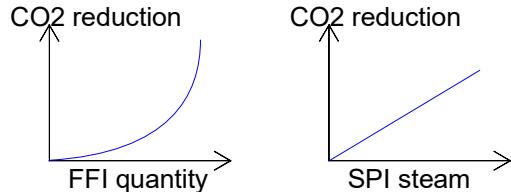

Copyright © 2014-2015 MESY GmbH

# The CER project in the application

Expected effect

CER technology requirements:

**Input:**

- Deionized water
- CO<sub>2</sub>-free Electric power

Zero CO<sub>2</sub> Energy Production

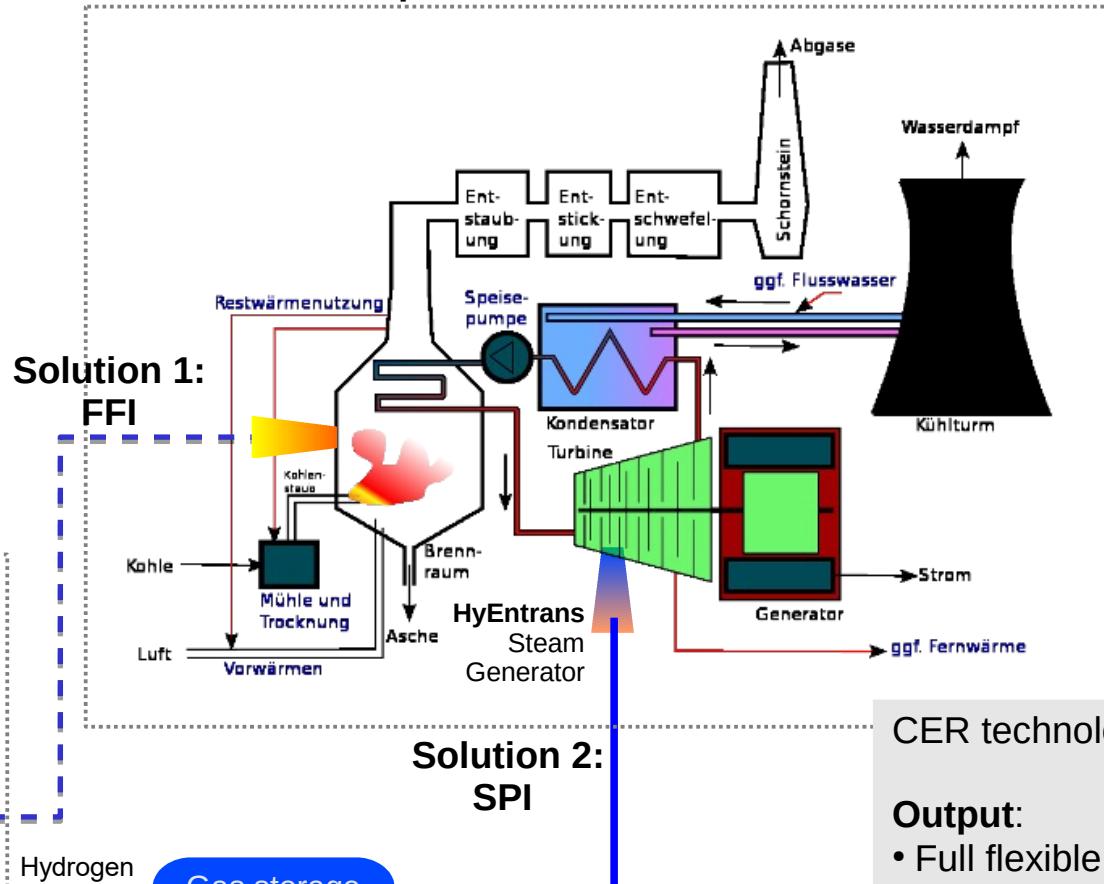

Electrolysis

LARET® or  
EIES®

Hydrogen  
Oxygen

Example: Coal Fired Power Plant

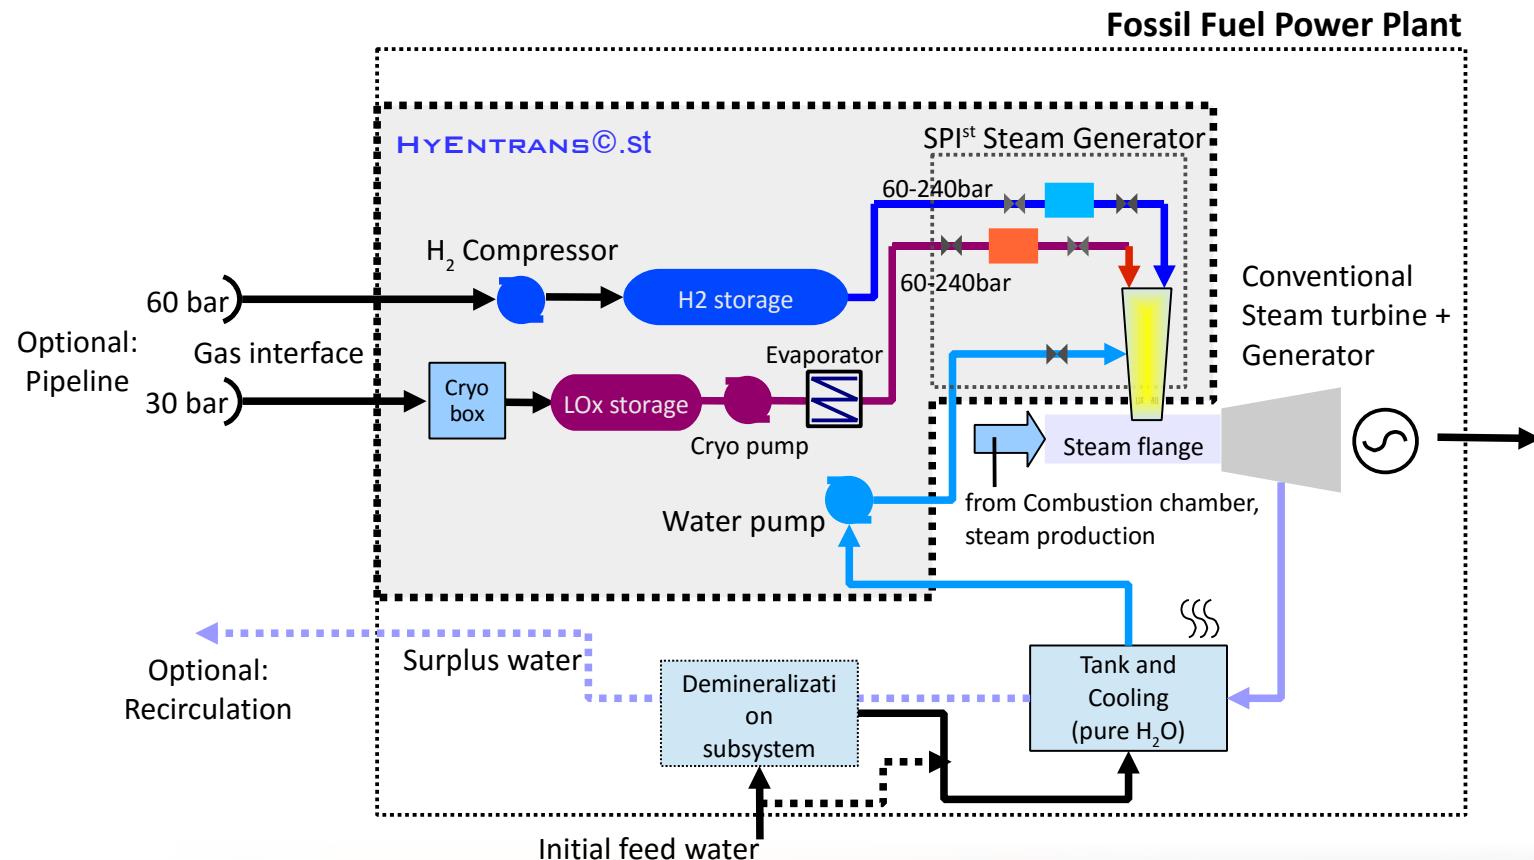

CER technology products:

**Output:**

- Full flexible Electric power
- Steam
- Heat
- Gas (Hydrogen + Oxygen)

# Products- and Interfaces: HYENTRANS *Hydrogen Energy Transformation Facility*

## HYENTRANS<sup>©</sup>-st System Overview

Mobility and Energy storage Systems

# Economy Effects of CER

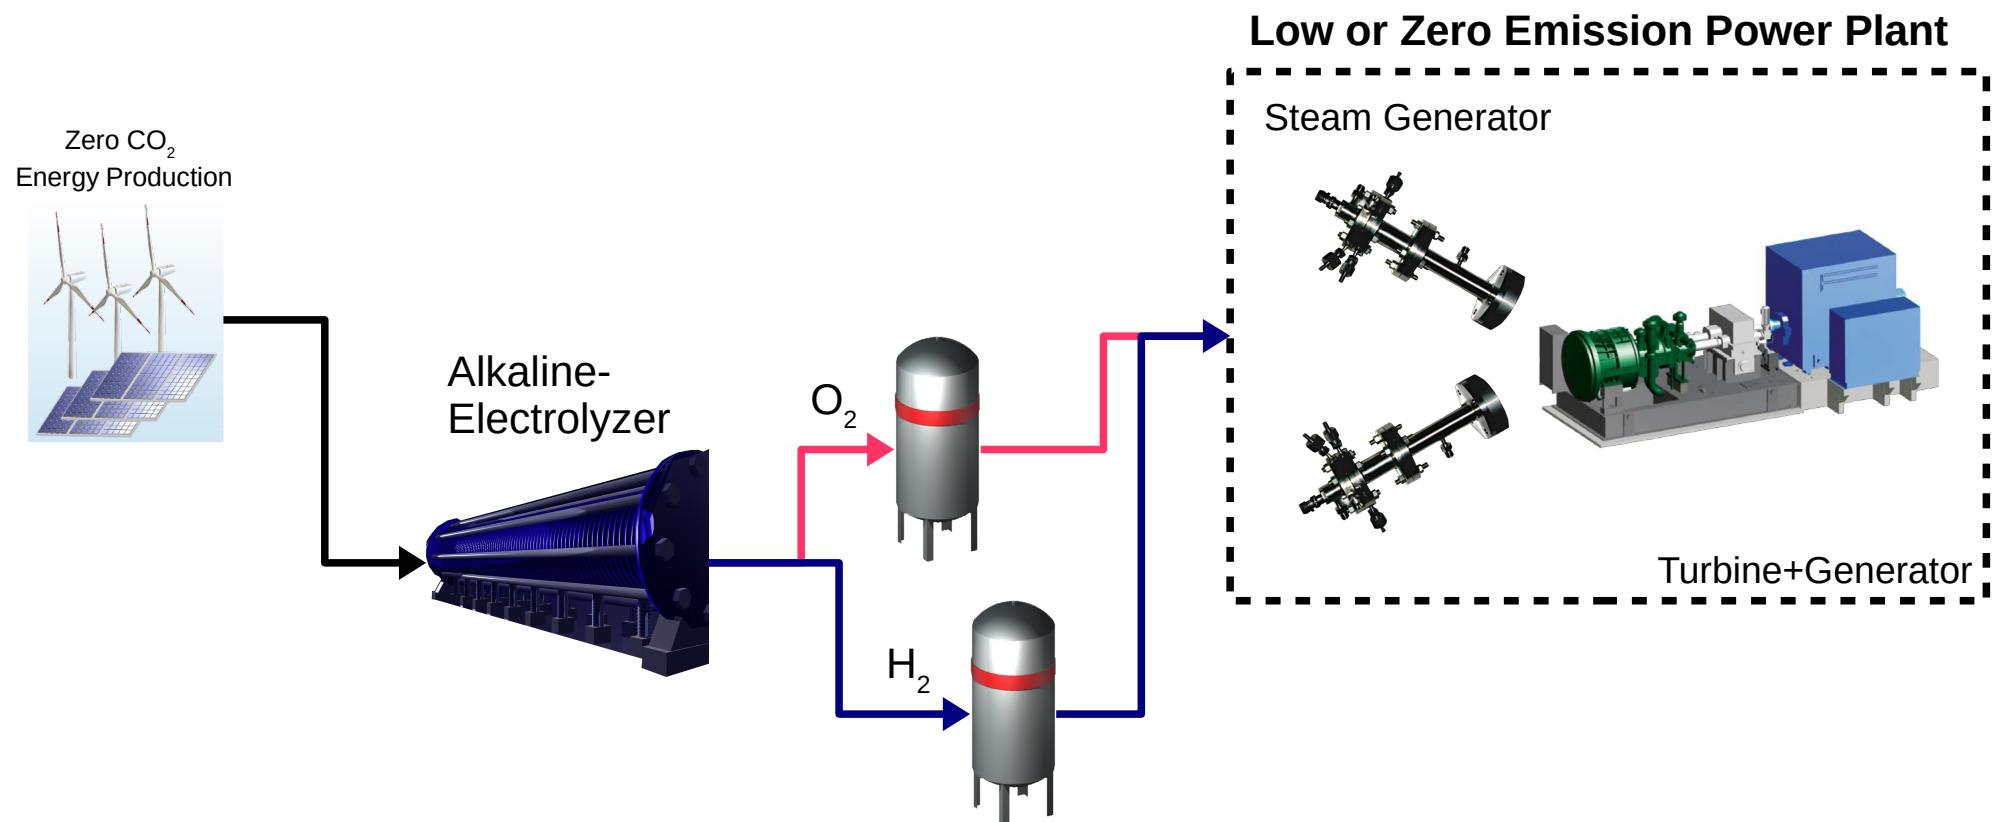

## Benefit for fossil fuel power plant operators

- Reduction in CO<sub>2</sub> emissions with NO follow-up costs
- Fast control performance for supporting grid stability
- Simple and save installation
- Simple integration and control
- Simple and low costs of dismantling
- High performance compression per volume
- No changes to the existing facilities
- In other countries: Reduction of investments in the expansion of electricity networks, because fluctuating electricity production from wind farms are smoothed before being fed. (In Germany, the potential would **11 Bil.€** investment savings = 25% Renewable Energy Production (=total green energy production of 2014), appraisal ~50% of 21 Bil.€ planed investment of Germany "Network Development Plan", Status 2013)

## Expenditure

- Requires Green Energy and Transformation into gas for one or more power stations

# Option for new power plants or installation in existing power plants

# MESY's solutions

## LARET<sup>®</sup> LARGE RENEWABLE ENERGY TRANSFORMER

- **Function:** Transformation of green energy into storable gases (hydrogen and oxygen).

## BLUESKY-ENERGY-DISTRIBUTION-SYSTEM<sup>©</sup> (bsEDIS<sup>©</sup>) includes

- **Function:** Transportation, storing and distribution of hydrogen and oxygen gases over 1000s of km with pipelines. This system covers standard gas interfaces for industry applications.
- Interface: bsEDIS-dPIPE
- **BLUESKY-COAL-POWER-SYSTEM<sup>©</sup>**
  - **Function:** Steam substitution system.
  - Interface: **bsEDIS-dPIPE**
  - Includes **BLUESKY-HYENTRANS<sup>©</sup>**
- **BLUESKY-GAS-POWER-SYSTEM<sup>©</sup>**
  - **Function:** Gas injection system with operational interfaces.
  - Interface: **bsEDIS-dPIPE**
- **BLUESKY-REPOWERING<sup>©</sup>**
  - **Function:** Transform hydrogen and oxygen gas into electricity and heat.
  - Interface: **bsEDIS-dPIPE**
  - Includes **BLUESKY-HYENTRANS<sup>©</sup>**

# Basic Data

## Transformer Infrastructure LARET<sup>©</sup>

- Typically Investment Transformer: 600-900 €/kW
- Connecting power per unit: 50 MW
- Energy purchase cost limit ~ 3 cent €/kWh or lower
- H<sub>2</sub> gas production only 6.300 tons per year

## HYENTRANS Steam Substitution and repowering

- Typically Investment **BLUESKY-HYENTRANS<sup>©</sup>**: ca. 120-160€/kW
